SUMMARY

Full-stack engineer with 3 years building Angular/TypeScript frontends and Node.js and Go backends for fintech and enterprise platforms. Owns features end to end — UI, API contract, schema, and deployment.

SKILLS

Frontend: Angular, TypeScript, RxJS, Reactive Forms, HTML5, CSS3

Backend: Node.js, Express.js, TypeORM, Go (chi), REST API Design, WebSockets

Databases: PostgreSQL, PostGIS, MySQL, SQL Server, Redis

Infrastructure: Docker, Kubernetes (k3s), Argo CD, Cloudflare Tunnel, MinIO, AWS S3

Testing & Tools: Cypress, Git, Postman/OpenAPI

AI-Assisted Development: Claude Code, OpenAI Codex, Gemini CLI

EXPERIENCE

Software Engineer – Full Stack, Liminal Custody — Nov 2025 – Mar 2026

First Answer India Services Pvt Ltd · Bengaluru

- Sole engineer on the transaction firewall policy engine, owning Angular configuration screens for transaction-risk, transfer, and travel-rule policies at 3–5 screens per family.
- Implemented the backend rule-evaluation engine and rule-condition-action schema, with Redis-cached short-circuit evaluation and TRM Labs integration for real-time address risk scoring.
- Built multi-organization RBAC scoping application access by token and role — Angular route guards, a JWT and organization-context HTTP interceptor, and backend authorization middleware.
- Integrated quorum approve/reject into policy changes, enforcing customer thresholds such as \$100K per 24 hours before high-risk transactions could execute.

Senior Associate Software Engineer, Light & Wonder — Aug 2023 – Jul 2025

LNW India Solutions Pvt Ltd · Bengaluru

- Built and modernised 20 modules and 50+ Angular screens across four casino product lines — Cage Credit, Servizio, Engage player data, and iView slot-machine displays.
- Fixed a video-memory leak that hung slot machines after about an hour, caching slideshow media and adding ngOnDestroy teardown for out-of-view components.
- Wrote and maintained 750+ Cypress end-to-end tests across Servizio and Engage with one other engineer, holding regression coverage through compliance-certified releases.
- Automated audit capture using SQL Server triggers across 100+ tables in Servizio and Engage, and built the Angular reporting UI for compliance reports.

Full Stack Intern, Light & Wonder — Mar 2023 – Jul 2023

LNW India Solutions Pvt Ltd · Bengaluru

- Built a Game Recommendation System in C#/.NET Core and Angular over a 16-week internship, covering REST APIs, SQL Server, and debugging.

PROJECTS

Medha — Independent Full-Stack Project — Aug 2025 – Present

Go · chi · PostgreSQL/PostGIS · Redis · MinIO · Docker · Kubernetes · Cloudflare Tunnel

- Building a Go/chi REST API deployed end to end on a self-hosted Kubernetes cluster — 21 bounded contexts, ~200 endpoints, 50 migrations, and 109 tests.
- Implemented PostGIS proximity search using ST_DWithin over a GIST-indexed geography column, with distance-ordered keyset pagination for location-based matching.
- Designed OTP authentication with JWT RS256 sessions and WebSocket messaging fanned out across pods over Redis pub/sub, with MinIO backing media storage.
- Deployed through Argo CD GitOps with dev/prod namespace isolation, default-deny NetworkPolicies, SealedSecrets, and an outbound-only Cloudflare Tunnel.

EDUCATION

Bachelor of Engineerin in Computer Science, Siddaganga Institute of Technology, CGPA — 8.65/10 — Aug 2019 – Jul 2023
