SUMMARY

Full Stack Developer with 3+ years of experience delivering secure, scalable web applications and APIs across fintech and regulated gaming. Builds responsive, component driven Angular and React interfaces backed by Go, Node.js, and C#/.NET Core services. Strong in REST API design, real time WebSockets, PostgreSQL/Redis, RBAC, automated testing, and production debugging. Experienced owning features end to end, from UI and data modeling through Dockerized CI/CD, while collaborating with distributed Agile teams to ship reliable software.

TECHNICAL SKILLS

- Frontend: Angular (2+), React, RxJS, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Responsive & Component-Based UI Design
- Backend: C#, ASP.NET Core/.NET Core, Node.js, Express.js, Go, Chi, REST API Design, WebSockets, Microservices
- Databases: PostgreSQL, PostGIS, SQL Server, MySQL, MongoDB, Redis
- DevOps & Tools: Git, GitHub, Docker, GitHub Actions, GitLab CI/CD, Perforce, SSMS
- Testing: Cypress (E2E), Unit Testing, Integration Testing, API Testing
- Concepts: OOP, Design Patterns, Agile/Scrum, RBAC, CI/CD, Component Reusability, Multi-Tenancy

EXPERIENCE

Software Engineer – Full Stack | Liminal Custody (First Answer India Services Pvt Ltd) Nov 2025 – Mar 2026

- Built Angular workflows for 3 custody controls—Transaction Risk, Travel Rule, and Transfer Policy—with RxJS state, cascading controls, and unsaved-change guards.
- Developed Node.js/Express REST APIs for firewall policy management with atomic bulk writes and transaction rollbacks for consistent concurrent rule updates.
- Contributed to Node.js-to-Go modernization of Bitcoin input resolution, replacing 1,742–2,124 extra RPC calls per large block and 58–70-hour worst-case waits with indexed UTXO lookups targeting sub-10 ms reads.
- Implemented multi-tenant RBAC and quorum flows with Auth0, 2FA step-up, and cryptographic signature checks for high-value custody endpoints.
- Built Redis caching for cross-chain quotes across 4 EVM networks—Ethereum, Polygon, BSC, and Base—validating ownership and expiry to reduce external API calls.

Senior Associate Software Engineer | Light & Wonder (LNW India Solutions Pvt Ltd) Aug 2023 – Jul 2025

- Developed modular Angular components and optimized relational queries and API payloads for large-scale player-management workflows.
- Built React slot-screen widgets supporting 3 interaction flows: attendant calls, beverage orders, and reservations.
- Built high-throughput C#/.NET Core Web APIs across 3 Cage-Credit workflows: bank accounts, voucher redemption, and check cashing.
- Engineered a React and LLM debugging tool for centralized frontend/backend telemetry and maintained Cypress E2E coverage to accelerate defect resolution.

Full Stack Intern | Light & Wonder (LNW India Solutions Pvt Ltd) Mar 2023 – Jul 2023

- Completed a 16-week C#/.NET Core and Angular internship; delivered a production game-recommendation system with user feedback and ratings.

PROJECTS

Medha – Full Stack Go, Android & Kubernetes Platform | Mar 2026 – Present

- Delivered an end-to-end Go REST and WebSocket API across 4 client surfaces—Android, iOS, web, and admin—using Chi, PostgreSQL/PostGIS, Redis, SeaweedFS, and ~49 SQL migrations.
- Structured domain-driven Handler-Service-Repository layers with pgx transactions, RFC 7807 errors, OTP/RS256 JWT authentication, and Redis Pub/Sub fan-out.
- Built a multi-role Kotlin/Jetpack Compose app across 6 feature and 5 core modules with UDF/StateFlow, Hilt, Retrofit/OkHttp, Room offline caching, FCM, and Keystore security.
- Deployed isolated dev/prod environments across 7 Argo CD applications on self-hosted Kubernetes using Docker, Kustomize, Sealed Secrets, Traefik, and Cloudflare Tunnel.
- Ran production with 2 replicas and zero-downtime rolling updates (maxUnavailable: 0); load-tested concurrent API traffic against a <300 ms p95 REST latency target.

EDUCATION & RESEARCH

B.E. Computer Science & Engineering, Siddaganga Institute of Technology · 2019–2023 · CGPA 8.65/10

Co-author, “Data Visualisation of Time Tradable Assets Using Machine Learning,” IEEE, 2023
