

VINAY K R

Software Engineer | Angular & TypeScript | Node.js / .NET / Go Backends | Applied AI Projects

Bengaluru, India | +91 7975893210 | vinayravindranatha@gmail.com | linkedin.com/in/vi-naykr | github.com/vi-nayKR | portfolio.vinaykr.workers.dev

SUMMARY

Software engineer with 3+ years of enterprise experience delivering Angular/TypeScript applications and end-to-end features across fintech and regulated gaming. Hands-on with REST APIs, Node.js, C#/.NET, SQL, Redis, WebSockets, authentication/authorization, Cypress, Docker, and production debugging. Currently building Go and Python/FastAPI platform projects focused on reliable APIs, agent workflows, caching, observability, and applied-AI integration.

SKILLS

Frontend: Angular, TypeScript, RxJS, Reactive Forms, HTML, CSS

Backend: Node.js, Express.js, C#/.NET Core, REST APIs, WebSockets; Go and Python/FastAPI in independent projects

Data: PostgreSQL/PostGIS, SQL Server, MySQL, Redis

Quality & Delivery: Cypress, Pytest, Git, Docker, CI/CD, OpenAPI, API debugging

EXPERIENCE

Software Engineer — Full Stack | Liminal Custody

Nov 2025 – Mar 2026 | Bengaluru, India

- Built Angular policy-configuration flows for transaction-risk, transfer, travel-rule, address-list, and wallet-group rules using reusable rule-aware controls and approval workflows.
- Implemented backend rule-condition-action evaluation and data modeling, with cached short-circuit evaluation and external address-risk integration.
- Debugged authorization and quorum approval flows, including organization-scoped access and approve/reject API integration.
- Contributed to multi-organization RBAC through Angular guards/interceptors and backend role/organization middleware.

Senior Associate Software Engineer | Light & Wonder

Aug 2023 – Jul 2025 | Bengaluru, India

- Built and modernized typed Angular screens across financial, player-management, and device-facing product workflows.
- Used RxJS and WebSocket integrations for real-time UI updates and fixed a subscription/lifecycle leak affecting long-running devices.
- Integrated Angular applications with C#/.NET APIs and SQL Server-backed financial workflows.
- Implemented audit-data capture/reporting workflows and maintained Cypress end-to-end regression coverage.

Full-Stack Intern | Light & Wonder

Mar 2023 – Jul 2023 | Bengaluru, India

- Built a game-recommendation application with C#/.NET Core, Angular, REST APIs, SQL Server, user feedback, and ratings during a 16-week internship.

SELECTED PROJECTS

Medha Platform | Go, PostgreSQL/PostGIS, Redis, Docker

- Built a domain-driven Go modular monolith with 21 top-level internal packages, PostgreSQL/PostGIS, Redis-backed real-time communication, S3-compatible storage, and infrastructure automation.
- The public snapshot contains 50 versioned SQL migrations, 109 Go test functions, and roughly 200 route registrations; designed explicit environment, secret, network, backup, and deployment controls.

FastAPI and LangGraph Agent Patterns | Python, FastAPI, LangGraph, Redis, OpenTelemetry

- Built a typed reference service for agent routing, human-approval checkpoints, SSE event streaming, Redis cache interfaces, and OpenTelemetry instrumentation.
- Twenty local non-integration tests and Ruff pass; deterministic workers and embeddings keep the project reproducible while provider-backed components remain documented extension points.

EDUCATION & RESEARCH

B.E. Computer Science & Engineering, Siddaganga Institute of Technology | 2019–2023 | CGPA 8.65/10

Co-author, “**Data Visualisation of Time Tradable Assets Using Machine Learning**”, IEEE, 2023.
